Warning: Use of Owen equipment contrary to manufacturer's specifications or operating instructions may result in property damage, serious injury or fatality. If you are not trained in the handling and use of explosive devices, do not attempt to use or assemble any Owen perforating systems or Owen firing devices.

Owen Oil Tools pre-assembles its tools as per the field operating manual. It is the responsibility of the purchaser to insure that this tool is assembled as required, prior to use.

This technology is regulated by and, if exported, was exported from the United States in accordance with the Export Administration Regulations (EAR). Diversion contrary to US Department of Commerce. Consult the BIS, the EAR and/or Owen Compliance Services, Inc. to determine licensing requirements for export or re-export of this technology.

This document contains Confidential information of Owen Oil Tools LP (Owen) and is furnished to the customer for information purposes only. This document must not be reproduced in any way whatsoever, in part or in whole, or distributed outside the customer organization, without first obtaining the express written authorization of Owen. Absolute Pressure Firing Head
Non Vented

MAN-TC-326

Owen Oil Tools

Blank Page

Description

The Absolute Pressure Firing Head Non Vented is used in TCP applications where pressure is applied internally to the tubing string in order to detonate the perforating guns. The Absolute Pressure Firing Head Non Vented may be converted to the Auto Vent or Auto Fill and Vent version with conversion kits.

The pressure applied to the tubing string acts on a piston that is held in place by precision shear pins. These shear pins are designed to shear at a predetermined load thereby allowing the operator to accurately determine the firing pressure of the head. When activated, the firing pin drives into the percussion initiator thus detonating the gun system.

Features and Benefits

- Compact size and rugged design make it ideal for use in horizontal or deviated wellbores
- Fits directly onto any Gun Top Sub with GO, 2.750 Acme thread connection
- Tool has connections for both 2-3/8" (60.3mm) and 2-7/8" (73mm) EUE threads
- Tool may be converted between Non Vented, Auto Vent and Auto Fill & Vent versions
- A low pressure [7,290 psi (50 200 kPa) maximum pinning pressure] and a high pressure [10,544 psi (72 700 kPa) maximum pinning

	Low Pressure		High Pressure	
	Maximum OD	3.375 in	85.7 mm	3.375 in
Minimum ID of Housing	1.600 in	40.6 mm	1.600 in	40.6 mm
Overall Length	16.6 in	421 mm	16.6 in	421 mm
Tensile	214,394 lb (95 367 daN)			
Maximum Temperature ¹	250° F (121° C)			
Maximum Pressure	7,290 psi	50.2 MPa	10,544 psi	72.7 MPa
Minimum Pressure (Minimum 2 pins required)	810 psi	5.6 MPa	1,318 psi	9.1 MPa
Connections	2-3/8 in (60.3 mm) EU Box / 2-7/8 in (73.0 mm) EU Pin Up GO 2.750 Acme Box Down			
Product (with Auto Vent)	TC-323-2375-000		TC-323-2375-200	
Product (with Auto Vent and Fill)	TC-324-2375-000		TC-324-2375-200	
Product (Non-Vented)	TC-326-2375-000		TC-326-2375-200	
Redress Kit	TC-323-2375-099		TC-323-2375-299	

NOTE
2000 psi minimum set
pressure recommended

¹The maximum temperature can be increased to 450° (230°C) by substituting the 90 durometer Nitrile O-rings with 90 durometer Viton O-rings. Refer to the Time vs Temperature chart for Explosives to confirm any explosives requirements

Absolute Pressure Firing Head
Non Vented

MAN-TC-326

For Assembly refer to Exploded View on Page 6

Step 1

Apply a film of grease onto the O-rings (item 12) and install onto upper housing (item 1). Install the seal ring (item 17) into the upper housing.

Step 2

Apply a film of grease on the O-rings (item 13) and install four onto the piston (item 3). Thread catch collet mandrel into piston (item 3). Slide shear pin ring (item 7) into catch collet mandrel followed by firing pin (item 6) and line up holes. Insert roll pin (item 11) into hole to connect the three pieces.

Step 3

Slide shear pin collar (item 7) over the shear pin ring (item 6). Line up the grooves and the shear ring holes and install the correct number of shear pins (item 8) spaced evenly around ring. The correct number of pins are determined by well conditions.

Step 4

Install bottom sub (item 1) onto upper housing (item 2).

Installation of Initiator and Initiator Retaining Nut

Step 5

Warning

In order to Maximize Safety, it is proper practice to install the Initiator in the field just prior to running the firing head in the well. Ensure the Perforating Gun is configured so the top shot is below the rig floor when installing the firing head.

Lightly grease all O-rings (items 11, 14, 15 and 16). Install O-ring (item 14) into the bottom sub (item 1). Install O-rings (15 and 16) onto the CP Initiator (item 18). Install O-ring (item 11) onto the retainer nut (item 9). Lightly coat the outside and inside seal bore of the retainer nut with grease.

Caution

Install CP Initiator by hand with gentle pressure. DO NOT use any pointed device to push the Initiator into the retaining nut as it may cause detonation and serious injury.

Install the CP Initiator (item 18) into the retainer nut (item 9) by carefully pressing it by hand until it is flush with the retainer nut. Install the retainer nut with CP Initiator into the bottom sub (item 1) with an allen wrench until it is flush with bottom sub internal face.

The Owen Oil Tools Absolute Pressure Firing Head is now assembled and ready to install on the gun top sub. Install the correct O-rings on the top sub as well as thread lubricant and tighten the firing head onto the gun string. Once tight, lower the tubing string onto the firing head in preparation for the connection make up. Apply thread compound to pin and insert into the upper housing then make up the connection.

Pinning Procedures
Imperial Calculations

Step 1 (Data)

- A. True Vertical Depth (TVD) _____ ft
- B. Maximum fluid weight in well when tripping _____ ppg (lb/gal) (Annulus)
- C. Fluid Weight in tubing when ready to fire _____ ppg (lb/gal)

Step 2 (Calculate Pressures)

- D. Maximum Hydrostatic at depth
($0.05195 * A * B$) = _____ psi
- E. Tubing hydrostatic when ready to fire
($0.05195 * A * C$) = _____ psi
- F. Greater of D or E _____ psi
- G. Absolute Firing Pressure
($F + 2000$ psi (minimum safety factor)) = _____ psi

Step 3 (Calculate number of pins)

- H. Shear Pin Rating
(405 psi Low Pressure, 659 kPa High Pressure) _____ psi
- I. Number of Pins
(G / H) = _____
- J. Roundup I = _____

Step 4 (Calculate Nominal Absolute Firing Pressure)

- K. Activation Pressure @ Firing Head
($J * H$) = _____ psi

Step 5 (Calculate pressure tolerance)

- L. Tolerance ($K * 0.05$) = _____ psi

Step 6 (Calculate surface pressure) - Pressure applied on tubing

- M. Nominal pressure ($K - E$) = _____ psi
- N. Maximum pressure ($M + L$) = _____ psi
- O. Minimum pressure ($M - L$) = _____ psi

Pinning Procedures
Metric Calculations

Step 1 (Data)

- A. True Vertical Depth (TVD) _____ m
- B. Maximum fluid weight in well when tripping _____ kg/m³
- C. Fluid Weight in tubing when ready to fire _____ kg/m³

Step 2 (Calculate Pressures)

- D. Maximum Hydrostatic at depth
($0.0098 * A * B$) = _____ kPa
- E. Tubing hydrostatic when ready to fire
($0.0098 * A * B$) = _____ kPa
- F. Greater of D or E _____ kPa
- G. Absolute Firing Pressure
($F + 14000$ kPa (minimum safety factor) = _____ kPa

Step 3 (Calculate number of pins)

- H. Shear Pin Rating
(2792 kPa Low Pressure, 4544 kPa High Pressure) _____ kPa
- I. Number of Pins
(G / H) = _____
- J. Roundup I = _____

Step 4 (Calculate nominal absolute firing pressure)

- K. Activation $J * H$ = _____ kPa pressure @ Firing Head

Step 5 (Calculate pressure tolerance)

- L. Tolerance ($K * 0.05$) = _____ kPa

Step 6 (Calculate surface pressure) - Pressure applied on tubing.

- M. Nominal pressure ($K - E$) = _____ kPa
- N. Maximum pressure ($M + L$) = _____ kPa
- O. Minimum pressure ($M - L$) = _____ kPa
