

KODIAK Enhanced Perforating System™

combines state-of-the-art perforating and well stimulation in one operation.

Benefits and Features:

- Improved production/injection performance
- High temperature ratings
- Near wellbore fracturing increases productivity
- Proven effective in reducing “Toe” breakdown pressure
- Like STIMGUN®, breaks through damage caused by perforating and drilling fluids
- As a pre-hydraulic frac treatment, reduces breakdown pressures & improves proppant placement

KODIAK Enhanced Perforating System™ utilizes a complex, sequentially burning, energetic material to generate a high pressure gas pulse to initiate and propagate fractures into the surrounding reservoir. This fracturing improves flow performance of the perforating tunnel and the reservoir. This is accomplished without the need for special hardware, and at minimal additional cost. Applications for the technology are everywhere companies perforate and require good flow communication between the wellbore and the reservoir.

Owen Oil Tools is committed to the development of innovative perforating technology that exceeds expectations for production enhancement. Owen is the world's largest manufacturer and distributor of perforating systems with manufacturing facilities in the U.S. and Canada and a network of more than 30 distribution centers in North America and 10 international offices.

Kodiak Enhanced Perforating System™ is available from Owen Oil Tools.
