

- FINE TUNE COMPLETION AND PERFORATING STRATEGIES WITH MORE PRECISE
- HYDROCARBON PRODUCTION PROFILING.

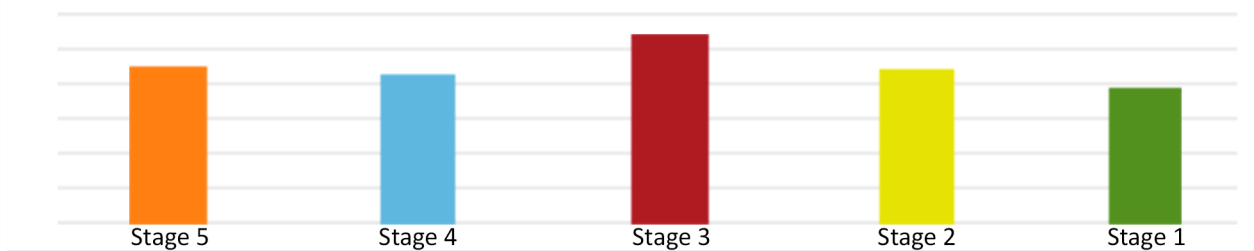

Delivering tracer to the formation via our enhanced perforating system, GoTrace provides the ability to uniquely profile flowback and hydrocarbon production in each cluster of your completion design. The energetic introduction of tracers during perforating also aids in the initiation and propagation of fractures to recognize performance gains while fine tuning frac operations.

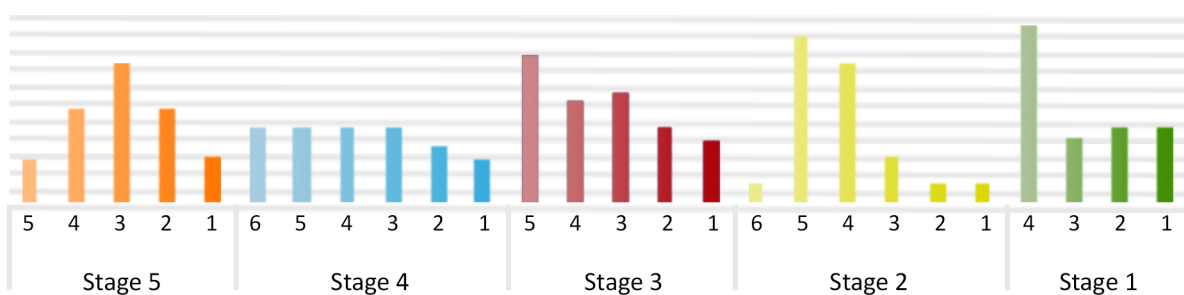

### Advantages:

- Evaluate cluster level stage contribution
- Energetic assisted tracer injection eliminates need for acid spearheads
- Ability to profile fluid returns for:
  - Bullhead refracs with new perforations
  - Perforated but not hydraulically fractured wells

STAGE FLOWBACK

CLUSTER FLOWBACK
