

## Inflow Monitoring

Core Lab's expansive portfolio of polymer embedded oil and water tracers provide identification of fluid type inflow and estimates contribution on a zonal basis from your reservoir. Core Lab's global network of laboratories ensures cost-effective 5 day sample analysis. With a lifetime of over 5 years, PhaseTrace inflow tracers provide quantitative data to inform production management decisions.

The flexibility to manufacture tracer polymers in any geometry allows for tracers to be deployed directly in various completion hardware configurations (sand screens, tracer carriers, and AICD housings, etc) and requires:

- ▶ No additional well interventions
- ▶ No added rig time at the wellsite
- ▶ No additional personnel at the wellsite
- ▶ No changes to operational procedures or completion design
